

Market segment: Industry

2N[®] Helios IP Safety

A first-class security intercom

SUITABLE FOR:

- FACTORIES/PLANTS
- PRODUCTION HALLS
- FREIGHT DEPOTS
- PHYSICAL SECURITY

BENEFITS:

- RESISTANT TO EXTERNAL INFLUENCES
- ROBUST DESIGN
- SIMPLE OPERATION

2N[®] Helios IP Safety

A first-class security intercom

Concept: Intercom

An emergency intercom must meet many expectations. Its primary function is to connect a person in difficulty with a competent operator who can provide assistance. It is essential for the intercom to be easy to find and simple to operate. It must be reliable and fully functional under all circumstances and the corresponding design must be resistant to the elements and mechanical damage.

Intercom design and color maximally conform to its function, yet overall appearance must be of a corresponding standard. Resistance to the environment is a necessity, but this must not restrict user comfort or the clarity of communication.

Intercom functions are determined by network connection and configuration. IP devices using standard SIP have a clear advantage, enabling duplex voice and video transmission, redirecting calls and interoperability with other, even remote systems.

Intercom management is an essential activity and its overall difficulty determines work efficiency at the company. It is therefore important for the intercom to have a clearly structured, intuitive interface that enables the configuration of all parameters. With the 2N[®] Helios IP Safety, the system administrator has two options – a web interface for the specific intercom or the 2N[®] Helios IP Manager, an application for the management of a number of intercoms from one location.

Solutions:

Production line

The 2N® Helios IP Safety is a reliable solution for calling assistance to the production line. Dust, noise and even water are no problem for the intercom and, thanks to its excellent acoustic properties, it enables comfortable communication even in a noisy environment. Resistance to mechanical damage and robust construction ensure a long service life, even under the difficult conditions of a production line.

Entry to a parking lot

The entrance to a parking lot is a typical spot that should not be without a functional intercom. In the event of a technical problem with the opening mechanism or automatic payment machine, or if the customer loses their ticket, a need to contact service personnel arises. This is where an intercom that is resistant to both the elements and mechanical damage is useful. Simple operation and excellent acoustic properties for clear communication are equally important.

2N TELEKOMUNIKACE

We are an international company based in the Czech Republic specializing in the development, manufacture and sale of IP intercoms. We have been active on the market since 1991 and we currently have 150 employees. We are proud of our high quality and reliable product portfolio. Our intercoms are the most technologically advanced products on the market, which is confirmed by important certification from Cisco or Avaya.

Thanks to our development and manufacturing facilities and years of experience, we can flexibly respond to the needs of the market and individual customers. We can meet the requirements of the most demanding clients, who we offer tailor-made solutions to meet their exact needs.

We are continually expanding our operation and currently do business with partners in more than 125 countries. You will find our branches all over the world.
