- ELEGANT DESIGN
- ROOM FOR YOUR PRESENTATION

2N® Helios IP Vario

Variability for your business

Concept: Intercom

Door intercoms for offices must meet many expectations. Their primary function is to control access to the building or office and connect visitors with people inside, in a manner that is comfortable for both sides. For us, as a manufacturer, fulfilling these legitimate requirements was a major challenge.

Intercom design sends a message about your company to visitors; it contributes to your company's image and, in an ideal case, should correspond to your corporate identity. At the same time, it should be resistant to external influences. Replaceable name plates or a graphic display, which you can adapt to the building or your corporate colors, can also help your company presentation.

Intercom functions are determined by network connection and configuration. IP devices using standard SIP have a clear advantage, enabling duplex voice and video transmission, redirecting calls and interoperability with other, even remote systems.

Intercom management is an essential activity and its overall difficulty determines work efficiency at the company. It is therefore important for the intercom to have a clearly structured, intuitive interface that enables the configuration of all parameters. With the 2N® Helios IP Vario, the system administrator has two options – a web interface for the specific intercom or the 2N® Helios IP Manager, an application for the management of a number of intercoms from one location.

Solutions:

Entry to an office building

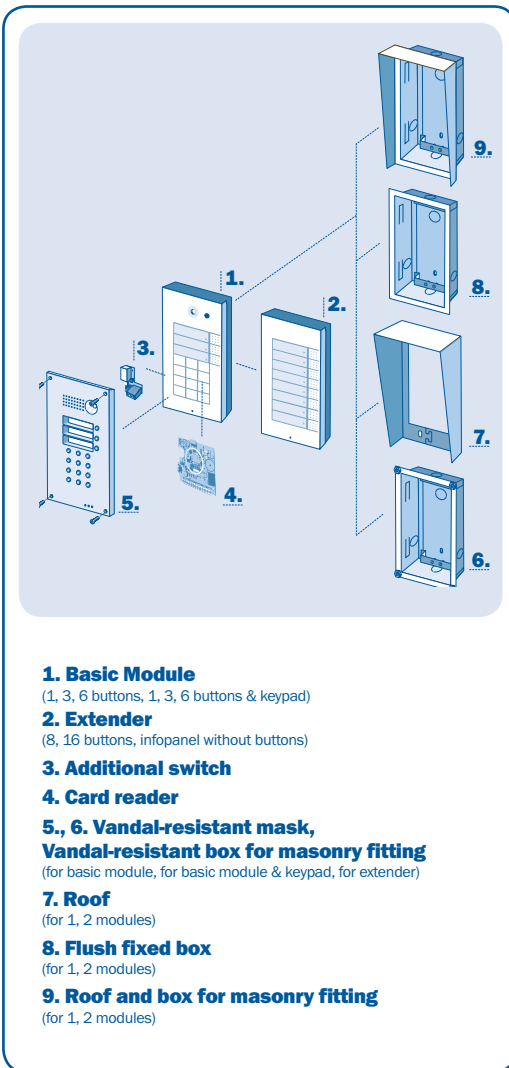

The 2N® Helios IP Vario with a keypad, camera or card reader installed in the wall by the entrance, with a roof for protection from the elements – is a typical solution for the entrance to office buildings. Employees and visitors are sure to appreciate the elegant design and functions. Direct dial buttons will connect visitors with the reception desk of individual companies in the building. If the receptionist is absent, the visitor will be connected to the mobile phone of the competent employee. The other party can then easily open the door from an IP phone or mobile. The visitor's identity can also be verified visually using a video-telephone or the PC HIP Eye application. Employees can simply open the door using a card or numerical code.

Zone access

The stylish 2N® Helios IP Vario with display will enable you to effectively communicate with business partners at the entrance to your company. When inactive, the intercom display can show your presentation and thus help create your company's image. Using the direct dial button, visitors can reach reception or select a concrete employee from the graphic telephone directory. Once again, employees can open the door using a card or numerical code. For additional security, the intercom can be connected to a fingerprint reader or external card reader. Thanks to time profiles and multiple numbers for each participant, you are sure your potential customers can always reach someone. If that is not the case, the intercom will send an e-mail with a photograph of your visitor to a general e-mail address.

Entry to the management office

One button on the intercom is reserved for the CEO's office. When the CEO's secretary is present, visitors ring through to her desk or mobile phone; if not, they will be redirected straight to the CEO's phone. Video recorded by the camera on the intercom can be easily connected to a surveillance system, so it is always clear who has entered. The door can also be opened using a card or by entering a code on the keypad.

1. Basic Module

(1, 3, 6 buttons, 1, 3, 6 buttons & keypad)

2. Extender

(8, 16 buttons, infopanel without buttons)

3. Additional switch

4. Card reader

5., 6. Vandal-resistant mask, Vandal-resistant box for masonry fitting
(for basic module, for basic module & keypad, for extender)

7. Roof

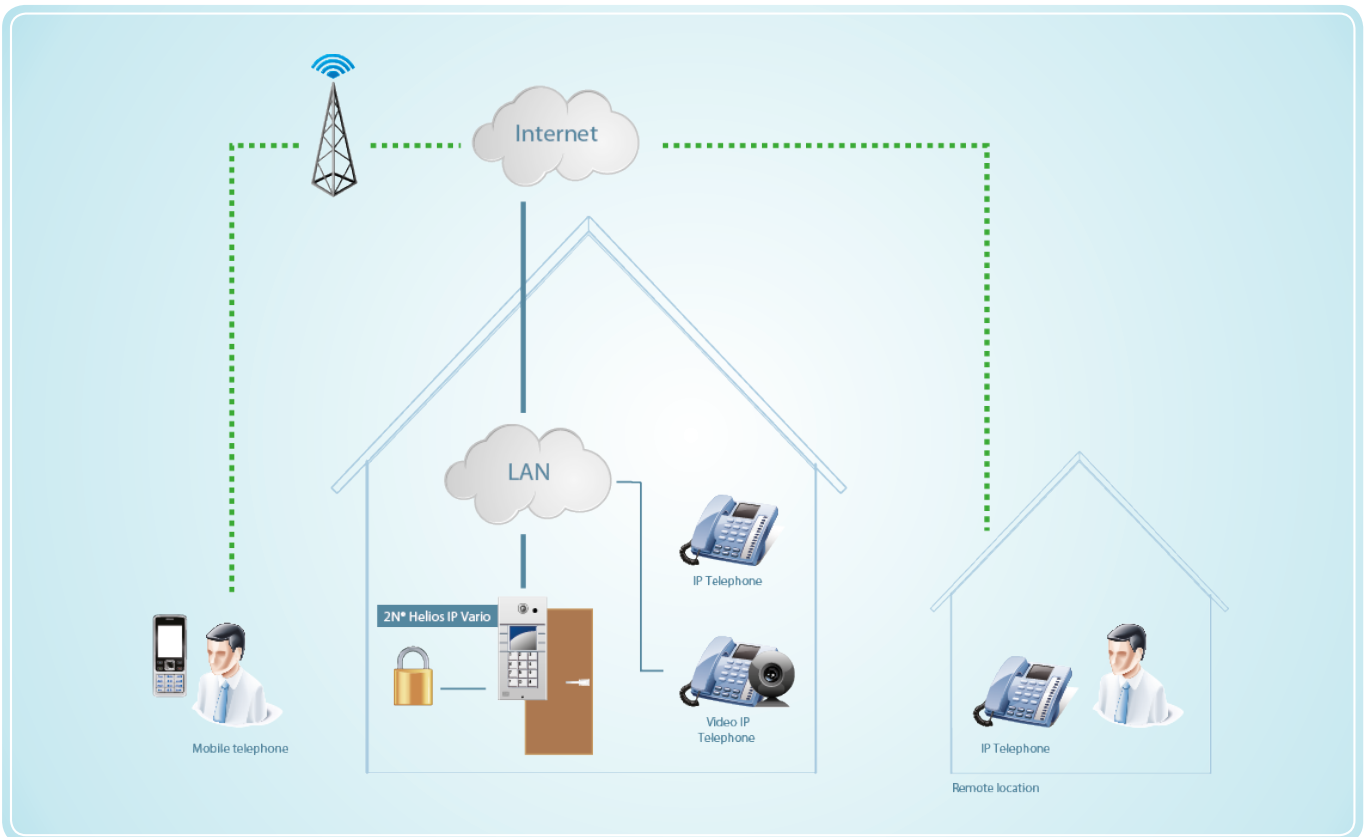

(for 1, 2 modules)

8. Flush fixed box

(for 1, 2 modules)

9. Roof and box for masonry fitting

(for 1, 2 modules)

2N TELEKOMUNIKACE

We are an international company based in the Czech Republic specializing in the development, manufacture and sale of IP intercoms. We have been active on the market since 1991 and we currently have 150 employees. We are proud of our high quality and reliable product portfolio. Our intercoms are the most technologically advanced products on the market, which is confirmed by important certification from Cisco or Avaya.

Thanks to our development and manufacturing facilities and years of experience, we can flexibly respond to the needs of the market and individual customers. We can meet the requirements of the most demanding clients, who we offer tailor-made solutions to meet their exact needs.

We are continually expanding our operation and currently do business with partners in more than 125 countries. You will find our branches all over the world.
